Patient's phone (iOS app)
Camera → Apple Vision pose → joint angles
SessionConductor: reps, holds, form, setup checks, turn-taking voice
SymptomRules and red flags: carry on, stop the set, stop, get help
CareMemory: eases a sore exercise next time
Lele chat, voice check-in, reminders
Video stays on the phone
counts, angles, symptom reports, chat
signed programs, targets, messages
Laile API (Swift, Vapor) on Tencent Cloud
Safety gate (fixed rules, runs before any model): red flags, medicine dose questions, physio's precautions
Programs: physio code, Lele's plans, catalog. First session is a check-in that sets targets. ContraindicationChecker removes anything a precaution rules out.
Lele's round: morning check-in, missed days, barriers, plateaus, visit prep, medicine reminders. Quiet hours, three a day at most. ReplyReader maps typed answers to options.
Records: sessions, measurements, care notes, requests (TencentDB for PostgreSQL)
question + context
reply, checked before saving
Models (they talk, code decides)
Tencent Cloud ADP: Lele agent
Hy3 model, knowledge base in two categories (physical therapy, medicines), Lele's prompt and fallback reply
Program drafts
Hunyuan when configured, otherwise a rule-based drafter. Both use only the vetted exercise library.
Lele's voice
ElevenLabs, cached per line; on-device voice as fallback
live view, daily list, approvals, signatures
Clinician portal (web): Today from Lele (most pressing first), live session view, approve or decline added programs, ask Lele to change a program, sign every program, discharge to a follow-on program, pre-visit report
