Patient's phone or browser (iOS app, web app)
Camera → Apple Vision (iPhone) or MediaPipe (browser) → joint angles
SessionConductor: reps, holds, form, setup checks, turn-taking voice
SymptomRules and red flags: carry on, stop the set, stop, get help
CareMemory: eases a sore exercise next time
Lele chat and planning by chat, voice check-in, reminders
Video stays on the device
counts, angles, symptom reports, chat
signed programs, targets, messages
Laile API (Swift, Vapor) on Tencent Cloud
Safety gate (fixed rules, runs before any model): red flags, medicine dose questions, physio's precautions
Programs: physio code, Lele's plans (a physio patient's plan waits for approval), catalog. First session is a check-in that sets targets. ContraindicationChecker removes anything a precaution rules out.
Lele's round: morning check-in, missed days, barriers, plateaus, visit prep, medicine reminders. Quiet hours, three a day at most. ReplyReader maps typed answers to options.
What Lele knows: goals, sessions, measurements, care notes, requests (TencentDB for PostgreSQL)
question + context
reply, checked before saving
Models (they talk, code decides)
Tencent Cloud ADP: Lele agent
Hy3 model, knowledge base in two categories (physical therapy, medicines), Lele's prompt and fallback reply
Program drafts and the physio's summary
Lele on ADP in its plan and brief modes, rule-based drafter as fallback. Drafts use only the vetted exercise library.
Lele's voice
ElevenLabs, cached per line for phone and web
live view, daily list, approvals, signatures
Clinician portal (web): Today from Lele (most pressing first), Lele's summary per patient, live session view, approve added programs and Lele's plans, ask Lele to change a program, sign every program, discharge to a follow-on program, pre-visit report
